Postman Practice

30 JULY 2015 on Exercise (/tag/exercise/), HTTP/API (/tag/http-api/), Level 2 (/tag/level-2/)

For problems #1 and #2, reference the Star Wars API
(https://swapi.co/documentation#intro)

1. Use Postman to GET a list of planets.

2. Use Postman to GET a single person object.

For problems #3 - #6, use the `https://api.vschool.io/[your_name]/todo`
endpoint.

3. Use Postman to POST 3 new todo objects. Run another GET to see them.
   Use the following template for your JSON body:

```
 {
   "title": "This is required",
   "description": "This is optional",
   "price": 0, //must be a number
   "imgUrl": "http://path-to-url.jpg",
   "completed": false //must be boolean
 }
```

4. GET one single todo using its `id` property.

5. DELETE one single todo using its `id` property.

6. PUT one single todo using its `id` property.
